

Toy Monte-Carlo of the 0027.HK accumulator (BS $\sigma=0.391$, 120,000 paths, MtM buyer = -39,886 HKD)

(a) 400 simulated spot paths --- blue = knocked out, red = survived to final

(b) PV distribution: 75% positive, fat left tail ($P[PV<0]=25\%$)

(c) cumulative accrual PV, sample paths (dot = KO)
